

Handsel brand sheet

Six pieces of one thing. A mark built from geometry, one gradient that flows through everything it touches, glass and grain where there is depth, and heavy type that stays quiet around it. This is the sheet a brand team hands over; everything on it is also a rule the gate can score.

exploration 02 · 2026-09-14, lockup 2026-09-16 · Slice mark on Direction A · source: brand/tokens.json, brand/rules.md, brand/build_mark.py

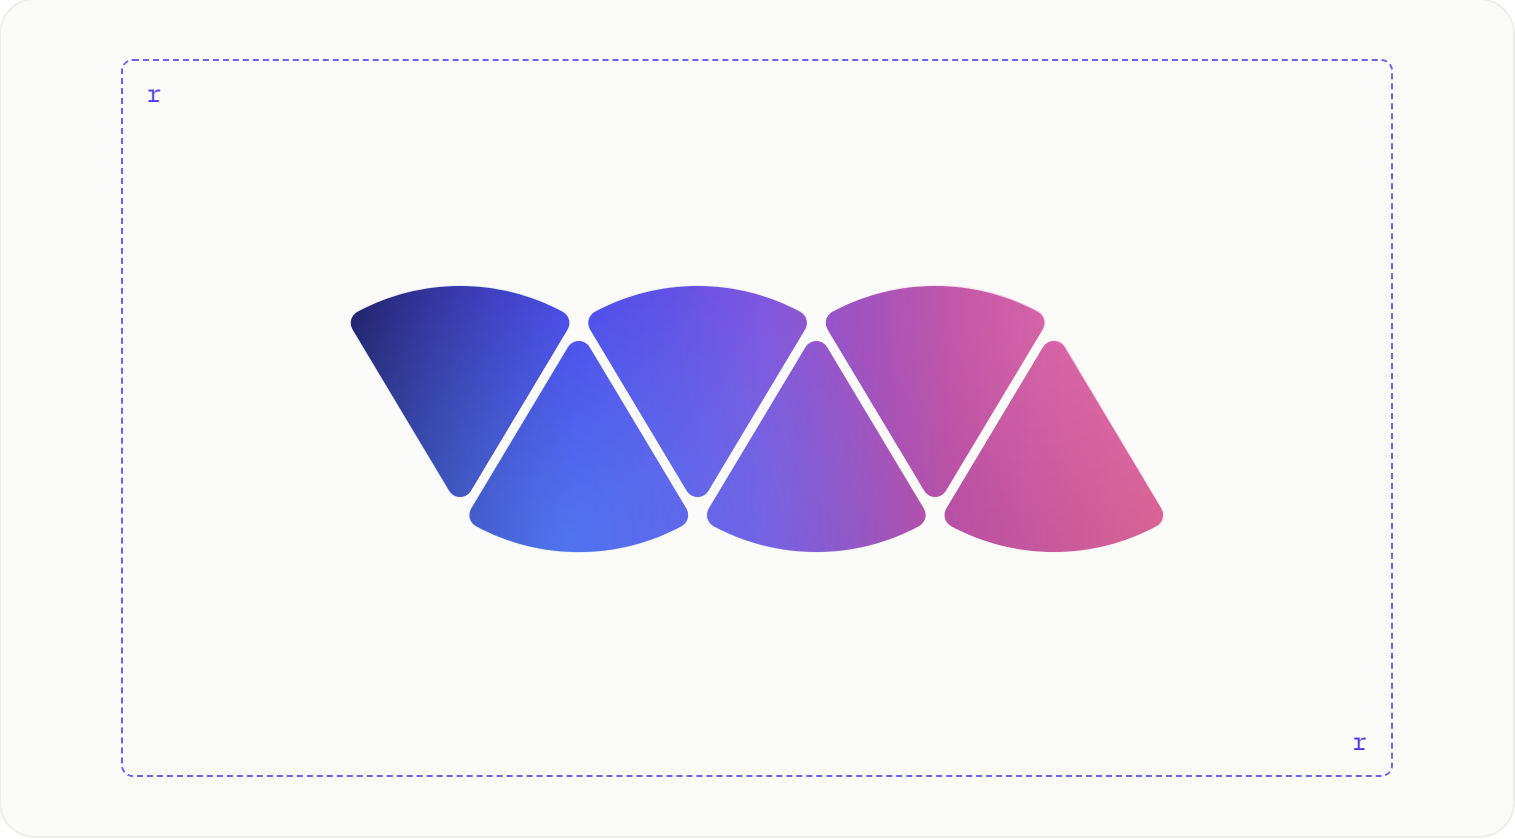

The mark

Six pie slices, apex down, apex up, in a 3:1 band. The flow runs through all six as one field.

Clear space

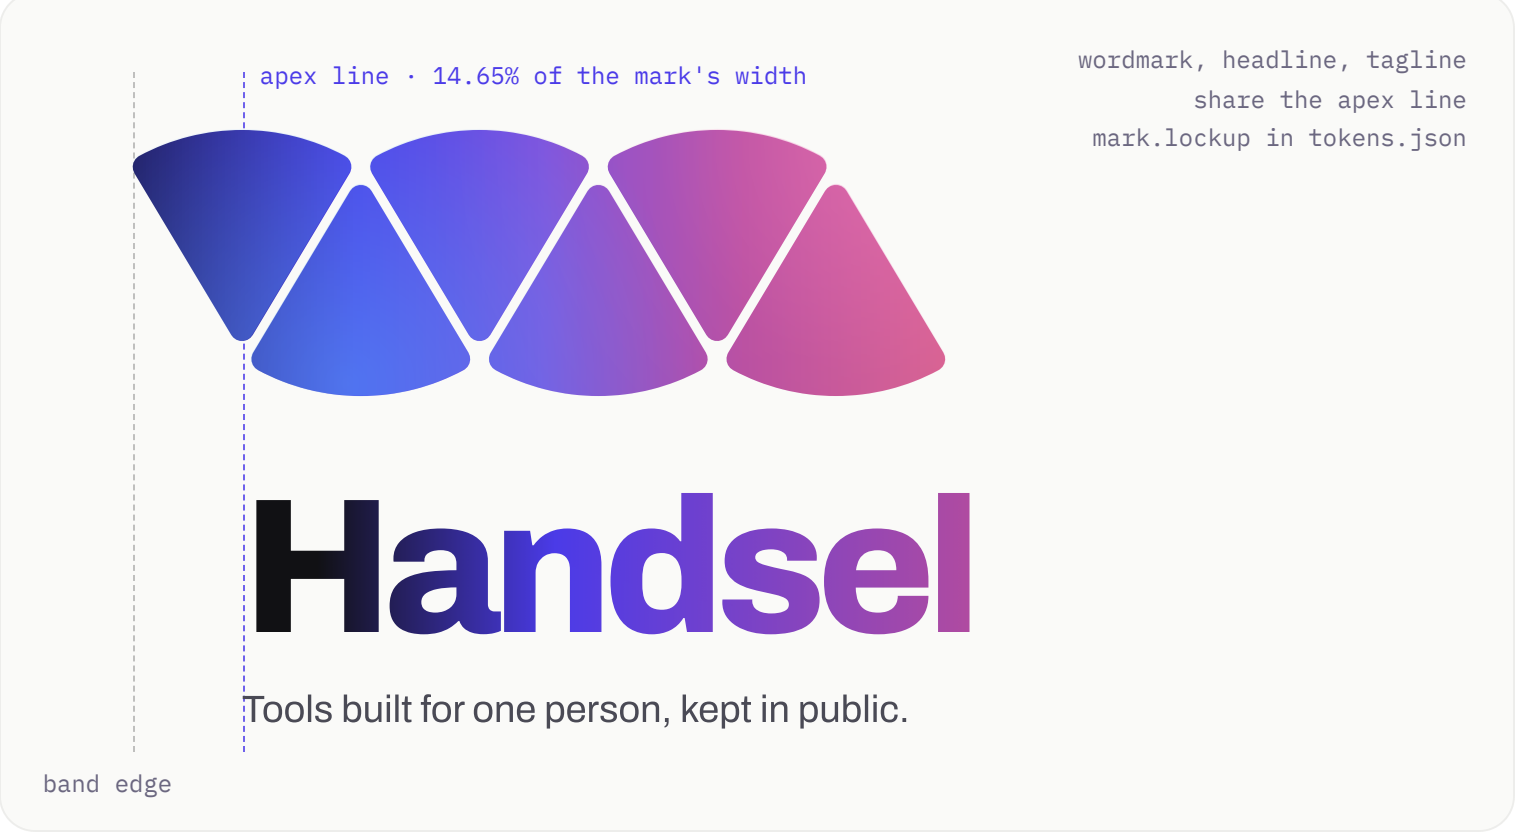

One slice radius on every side. Minimum width 96 px on screen, 28 mm in print.

The mark is never rotated, mirrored, outlined or given a shadow. A single slice may stand alone as the avatar or favicon unit.

The lockup

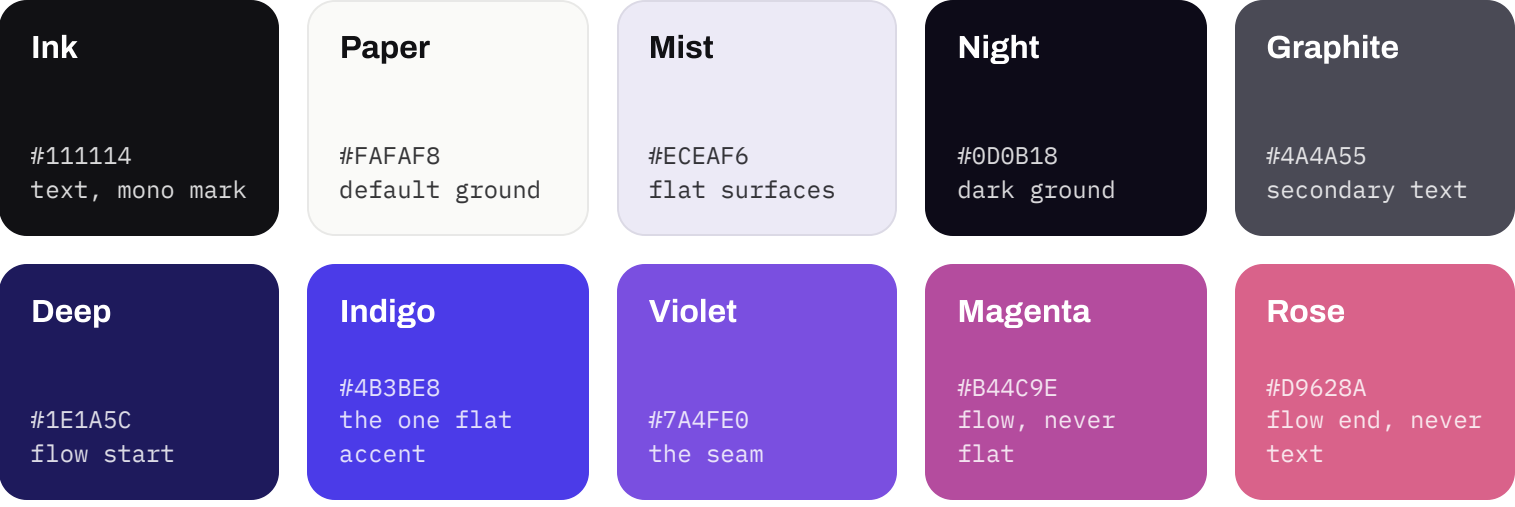

Type beside the mark starts on the first slice's apex line, the lower corner of the leftmost slice. Never on the band's edge.

The leftmost slice points down, so its lower corner is its own centre line, 108.3 units of the 739 unit band in from the left edge. Every line of type on a surface takes that x, whether the mark sits above it or beside it, so the H stem reads as hanging from the first apex. The first corner of the second slice sits 19 units further right; the apex is the datum.

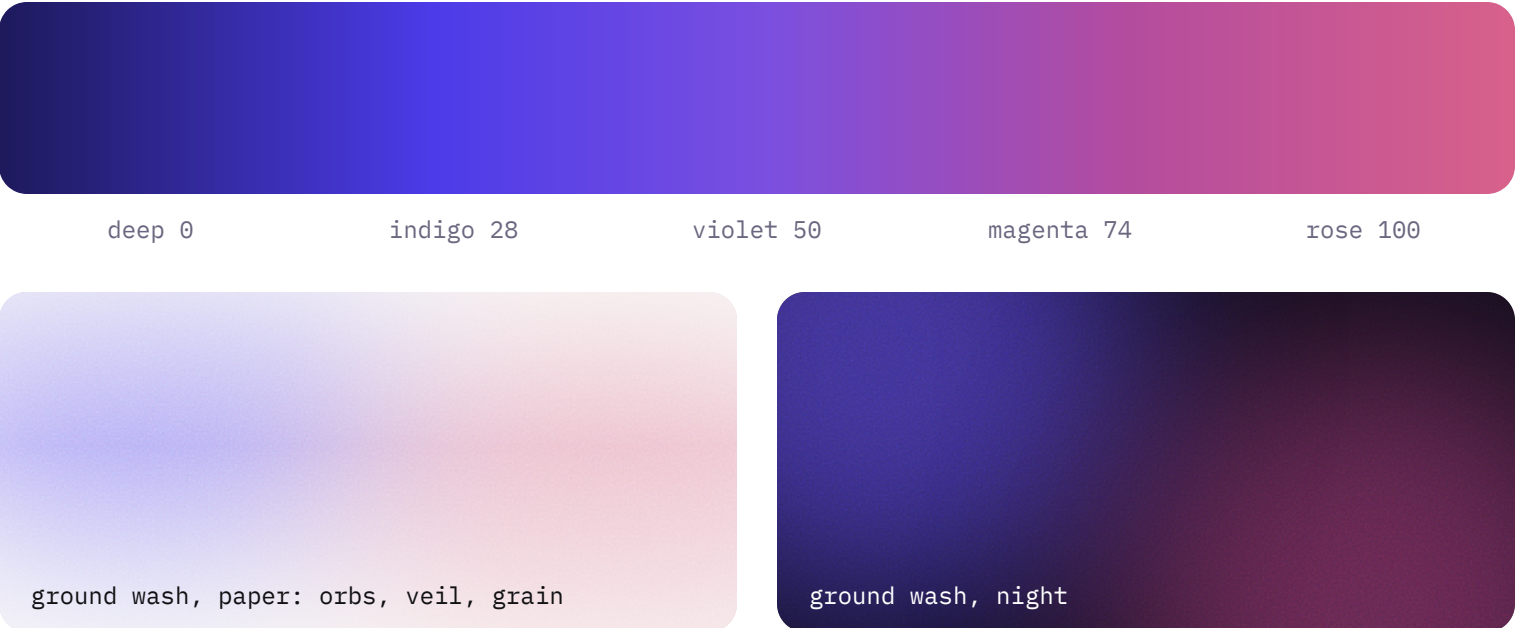

Colour

Three grounds, one ink, five gradient stops. Indigo is the only flat accent. No stop is ever text.

The flow

One gradient, left to right, deep indigo to rose. Raw on the mark. Display type takes the text variant, which starts from ink. Softened to a wash when it is a ground.

Type

Archivo for everything that is read. IBM Plex Mono for labels and data.

A brand that stays itself across a hero, a story card, a Slack avatar and a printed poster, and still has room to move. Body copy sets in Archivo at 17 px with a line height of 1.5, under 75 characters a line.

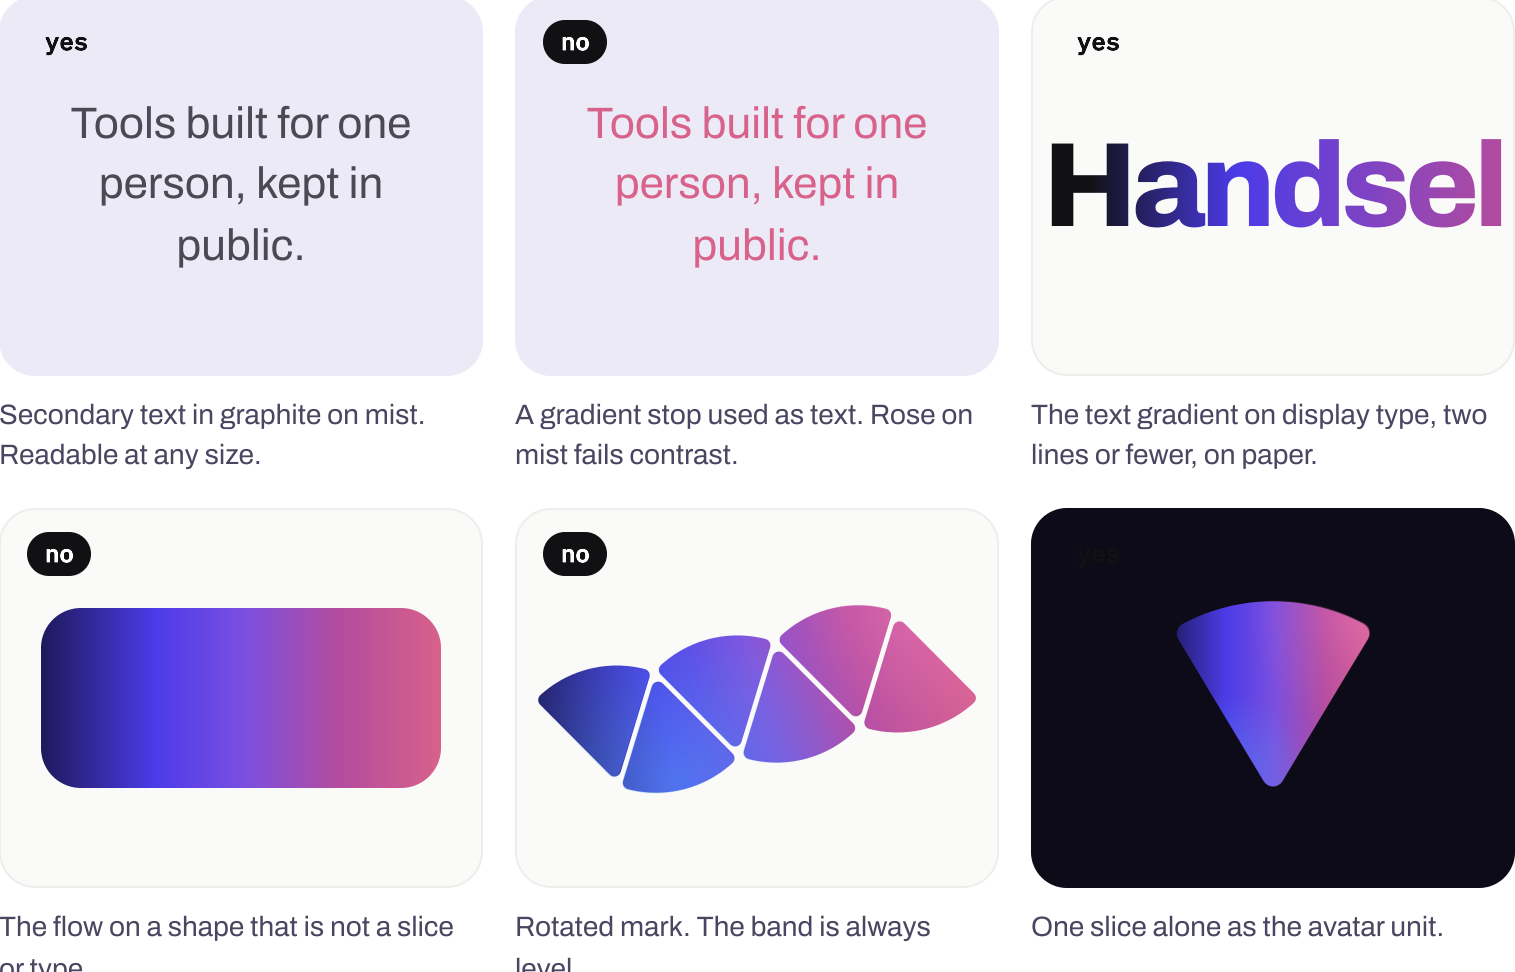

Archivo 400 body, 17 / 1.5

gate: on_brand=0.91 novelty=0.42 seed=118234

IBM Plex Mono code and data only

Do and do not

Each of these is a check the gate runs.

Geometry

Measured off the PSD and regenerated by brand/build_mark.py, so the ident and the gate read the same numbers.

slice radius	189
apex angle	62°
pitch	209
stagger	104.5 right, 40 down
seam	6
corner round	22 stroke, round join
band aspect	2.95 : 1
type left edge	first apex, 108.3 in
